

Machinery and plant transfer

Whatever the challenge you are facing, we have a strong, experienced team standing by to help you with all your machinery and factory transfer needs – from dismantling to installation. Our team has both long experience in the industry and the special equipment it takes to lift and move your machinery and production equipment, or your entire plant.

We move fast and efficiently

Together with you, we make a plan of how to carry out your project in the best manner possible, so you are moved quickly, with minimal production loss. Collaboration with Intego is your guarantee for an efficient transfer that meets your specific needs.

We do it all – and with just one contact person

With our broad ranging skills and knowhow in the fields of electrical technology, automation and mechanics, we offer a one-supplier solution that combines dismantling, moving and installation. We provide one of the strongest teams in the industry, which takes care of dismantling of machinery and technical installations, transport and preparation of the new plant, installation of electrical, IT, heating, water, compressed air and ventilation, as well as crane delivery and setup, commissioning and subsequent service.

We know how to optimise your production

Along the way, we can challenge you on how to incorporate LEAN and safety as part of the process. Our team is used to advising companies on how LEAN and safety can be implemented in practice – regardless of whether you are designing your new plant's interior or optimising your production facility. We also ensure that the necessary documentation is drawn up, so you meet the requirements of local and international authorities.
