# Compulsory inspection

# Compulsory inspection

■ At Intego, we have acquired in-depth experience in conducting compulsory electrical and mechanical inspections. In addition to being required by the authorities, periodic inspections help prevent accidents and downtime and thereby improve your company's production safety.

Together, we plan the necessary inspections, so they cause the least possible disruption to production. A service agreement with us is your guarantee that your company is compliant, at all times, with the relevant rules in effect.

### Your safety – our strength

At Intego, we have great breadth of expertise in the electrical and mechanical fields and, therefore, you can leave the regular inspections to us with peace of mind. We perform the inspections according to an established procedure that is compliant with relevant legislation. This way you can be sure that buildings, tools and other equipment are effective, so you avoid downtime and fires and are always compliant with the legislation in effect.

### User-friendly customer portal

Following inspection, we deliver all documentation via our web-based customer portal at [www.intego.dk](http://www.intego.dk). Here, you will find, e.g. inspection documentation, the date of your next inspection, contact persons and statistics. When the authorities ask for documentation, you always have easy access to it through your page on our customer portal.

### Certification is your quality guarantee

Intego is DBI-approved for conducting electric thermography. The certification, which more and more insurance companies now require, is your guarantee that the thermography is conducted correctly. The thermal images show temperature deviations and reveal any errors on panels and technical installations in your company. We are also DBI-certified to perform installation, service and maintenance of ABA, ABV (thermal) and AVA systems.

DBI-certificeret inden for:

- Thermography
- ABA – automatiske brandalarmeringsanlæg (automatic fire alarm systems)
- ABV – automatiske brandventilationsanlæg (automatic fire ventilation systems)
- AVA – automatiske varslingsanlæg (automatic warning systems)
